Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1912 Excerpt: . return to its initial position. The Gill selector for telephone service is wound to a resistance of 4,500 ohms so that it can be bridged directly across the telephone circuit and operated without the use of relays on from eight to 25 millampères without change in adjustment. The sending of the proper combination of current impulses is accomplished by automatic calling keys at the dispatcher's office. A key consists of a spring-driven train of gears operating a circuit breaker, the specially cut code wheel sending out over the line a certain combination of impulses which brings to the contact position only that selector at the station desired to be called and which alone responds to the combination just made. No adjustment of keys is necessary. All the keys for a circuit are assembled on the dispatcher's desk in a convenient cabinet, as shown in Fig. 717. The dispatcher is assured of the call being received at the station, as he receives an answer back signal from the station bell itself. The Gill bridged telephone selector may be used with a bell rung by a local battery or by the main line battery, this latter being Fig. 717. Main Line Bell Outfit--Uncovered. Fig. 719. Gill Selector. United States Electric Company. Figs. 716-719. Gill Selector Train Dispatching Apparatus. United States Electric Company. or local batteries at the stations, and without causing a loss in telephone transmission. It is operated by direct current from dry cells,...
